

# Arch - Easy Read

## What happens in Arch?

Two people will try to build an arch out of blocks.

Some of the blocks are made of ice.

Some of the blocks are made of concrete.

A choir will sing for the whole performance.

The arch is very difficult to build.

It might not stand.

Hopefully, the arch will stand.

After it stands, the arch will also fall.

## What is Arch about?

Arch is about people, materials, and systems.

Together, we imagine and build systems, like the arch.

The systems can be beautiful.

But they can melt and fall, like ice.

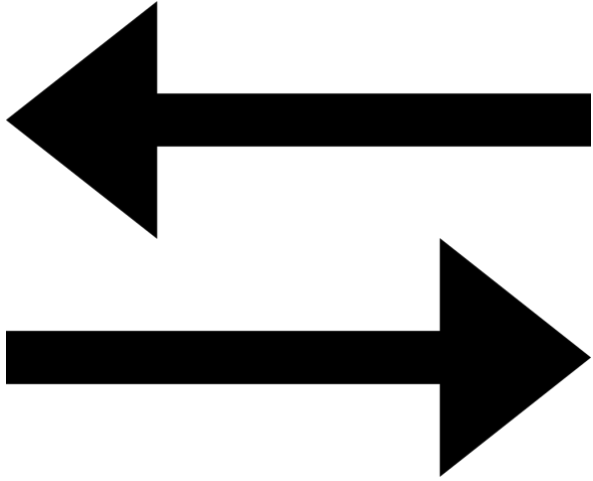

**What can I expect?**

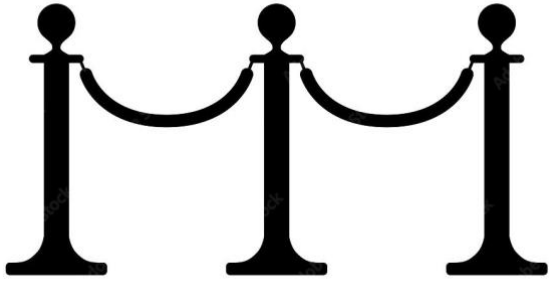

Arch happens outside in a big space.

You can stand, sit, or move around.

You can come and go whenever you want.

Please stay behind the barrier.

Please do not touch the arch.

There will be lights pointed at the arch.

There will be a fire under the arch.

Sometimes there will be gas and noise from fire extinguishers.

There will be some drilling.

There will be some sawing.

There is always singing.

Sometimes the choir sings quietly, sometimes louder.

The performers don't speak to the audience.

The performers might speak to each other quietly.

Arch should last about 2 hours.

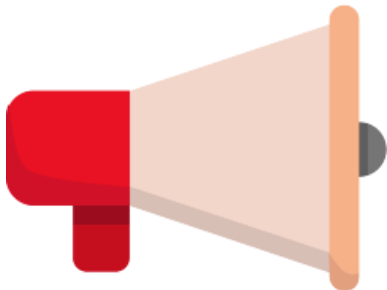

We don't know exactly how long it will last.

Sooner or later, the arch will fall down!

The fall is fast and can be loud.

You won't be near or next to the arch.

Arch is an artwork by Kaleider
